Actual Shoulder
HemiCAP® Patient
and Former World
Champion Powerlifter

Are your patients looking for a motion preserving alternative to Shoulder Replacement?

HEMICAP PATIENTS #STAYACTIVE

Arthrosurface HemiCAP implants restore **only** the damaged surfaces of the joint, allowing you to perform a primary total or reverse shoulder later on. Bone is preserved and the patients' native biomechanics are left intact. Surgery can be performed on an outpatient basis and your patients are able to resume their active lifestyles.
